Dear Judge,

I believe there are thousands of e-mails regarding this case. I will try all my best to be short and sharp.

In 1999 i have to buy a new computer because my old one was very slow. Usual, computer prices are dropping every few months. At that time the situation was different and special the cost for the memory was up. Why? There was a big earthquake in Taiwan and Taiwan is a main memory producer. In a few months everything was back to normal but i believe you understand my point. In this case it was a natural disaster, but it could be anything. Your car has two separate brake circuits in case one of them fails. What if Microsoft will get bought by a sick mind like those responsible for the 11-th september. There are many ways things could go wrong in this situation. It's risky to put your money in just one place.

Anyway, life will go on with or without Microsoft. Roman Empire was powerfull and invincible for a long time but it disapear in the final.

just a small dot in this world,
eugen
